Reading Skill: Explaining Sequence

As you recall, chronological order is the sequence in which events take place in time. Identifying the order in which events happen can help you understand how these events are related. Complete the time line below by making appropriate entries. Answering the questions below will help you finish this task.

READING STRATEGY: QUESTIONS

- ___ 1. When did Aristotle develop the geocentric theory? When did Ptolemy expand on Aristotle's theory?
-
- ___ 2. Which of these two events took place first?
- al-Khwarizmi develops algebra
 - Euclid develops geometry
- ___ 3. Which of the following represents the correct chronological order?
- Galen focuses on anatomy; al-Razi identifies and describes many diseases; Ibn Sina publishes *Canon of Medicine*
 - Ibn Sina publishes *Canon of Medicine*; Galen focuses on anatomy; al-Razi identifies and describes many diseases
 - al-Razi identifies and describes many diseases; Ibn Sina publishes *Canon of Medicine*; Galen focuses on anatomy
- ___ 4. Note if the following statements are true or false. Consider chronology when choosing your answer.
- Al-Khwarizmi based his work on the writings of Maimonides.
 - Gersonides challenged the ideas of Ptolemy.
 - Al-Razi probably had read the works of Galen.
